

### **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

#### **Listing of claims:**

1. (previously presented) A gyroscopically stabilized throwable implement comprising:  
a disk-shaped body having an essentially convex first surface and an essentially concave second surface; and  
a plurality of flexible fingers disposed in a first circle on said second surface and protruding for a predetermined distance away from said second surface, said first circle having a center essentially concentric with an axis of rotation of the implement.
2. (previously presented) A gyroscopically stabilized throwable implement in accordance with claim 13 wherein said body further comprises a lip edge forming a peripheral boundary of said depression at said second surface.
3. (previously presented) A gyroscopically stabilized throwable implement in accordance with claim 1 wherein said plurality of fingers further comprise an attachment portion affixed to said second surface in a second circle concentric with said first circle and having a radius greater than said first circle and a cantilever portion, elevated and essentially parallel to said second surface, and disposed between said attachment portion and said first circle.
4. (previously presented) A gyroscopically stabilized throwable implement in accordance with claim 3 wherein said plurality of fingers further comprise a crooked portion directed toward the axis of rotation, disposed essentially parallel to said second surface, and elevated by a predetermined distance from said second surface.

5. (previously presented) A gyroscopically stabilized throwable implement in accordance with claim 1 wherein said plurality of fingers further comprise a ridge portion disposed at an end of each said finger spaced away from said second surface, at said first circle, and projecting away from said axis of rotation.

6. to 12. (cancelled)

13. (previously presented) A gyroscopically stabilized throwable implement in accordance with claim 1, further comprising a depression disposed in said second surface, having an essentially flat bottom, and centered on said axis of rotation of the implement.

14. to 15. (cancelled)
